auctions (*cont.*)
first-price auctions, 226, 228, 232–235, 238–241
format variations/relationships, 228–229
generalized second-price auctions, 387
independent private values (for items), 227
oral bid auctions, 226
potential energy of, 261
procurement auctions, 277
reserve prices, 240–241
revenue equivalence, 239–240
second-price sealed-bid auctions, 226, 229–232, 277, 290–291
setting prices through, 387
single-item auctions, 258, 261–262, 275
types of, 225–233, 258, 261–262, 275
Vickrey auctions, 226, 229–232, 277, 290–291
winner's curse, 233–234
audience, 479, 485, 486
audience size, 460–469, 471–473, 475–476
augmenting paths, 266–267
authorities (in Web searches), 356–358, 364, 368–374
Authority Update Rule, 356–358, 370
authority vectors, 371, 374
autonomous system, 38
average distance (over pairs of nodes), 33, 40–41

Balance Theorem (Harary), 111–112, 117–118
balanced division (of a network), 123
balanced outcomes, 317–320
application/interpretations of, 319–320
defined, 318–319
balanced triangle formations, 109
bargaining
formulation as a dynamic game, 321–322
Nash bargaining solution, 310–312, 318–320, 322, 324–326
outside options in bargaining, 310–312, 318–324, 326
role of social status in, 312
two-period version of, 323–324
bargaining game, 321–325
Barnes, John, 23
Basic PageRank Update Rule, 359–360, 374, 377
basic reproductive number, 570–572, 574–575, 578–579, 591, 592–593
Bayes' rule, 430–434
and events, 430–434
in the herding experiment, 434–436
and sample space, 430–431
spam filtering and, 433–434
taxi cab example of, 432–433
Bayesian learning, 635–638
behavior of networks, 4–6
behavior(s)
aggregate behavior, 15–17
cascading behavior, 501–505
connectedness and, 11–15
and game theory, 7, 8–9
information conveyed by, 13
multiple, coexistence of, 501–505, 523
networked coordination game, 499–500
threshold for adoption of, 501–505
bell curve, 480
Berkowitz, Lawrence, 426
Berners-Lee, Tim, 334, 339
best friends, 303, 305
best-response dynamics, 213, 215–217
best responses (in games), 146–149
Betamax technology, 464
betting. *See also* expected utility; horse races; wisdom of crowds
expected utility, 611–613
inverse odds, 617, 619, 640–642
logarithmic utility function, 612–615, 617, 641–642
risks, 610–611, 617, 624, 629–630
utility function, 611–615, 617, 624
betting markets, 608–609, 619, 621, 639. *See also* prediction markets
betting your beliefs, 613
betweenness, 66–67
of edges, 67, 68, 71, 74
of nodes, 67, 74
as a source of power, 303, 307
values computation, 71–74
